NETWORKED
RADIATION TRACKING SYSTEM
Model- DSI-2NT-ITS

Are Dirty Bombs or Nuclear Explosives moving through your Facility?
You need to know!

FEATURES:
• DETECT VEHICLES CARRYING NUCLEAR MATERIALS
• TRACK MOVEMENT WITHIN YOUR FACILITY
• OR AROUND TOWN
• PLACE DETECTORS AT ANY TRAFFIC LIGHT, ETC
• SERIAL OR ETHERNET BASED ALARM AND DATA COLLECTION
• SEPARATION OF MEDICAL, HIGH GAMMA AND ATOM BOMB MATERIAL
• SENSITIVE - 1µ R/hr RESOLUTION
• SMALL SIZE
• RUGGED, SPLASH PROOF
• WIDE RANGE
• CONNECTS TO YOUR EXISTING WINDOWS or LINUX NETWORK
• CAN BE SET TO ALLOW INTERNET ACCESS FROM REMOTE SITES
• USER SETTABLE ALARM LEVELS
• TARGETED and OMNI-DIRECTIONAL DETECTORS

TRAFFIC SIGNAL MOUNT

Who benefits: If your facility is open to the public such as an Airport or State Capitol or Financial Center. If your facility receives, or handles freight or packages, then for everyone’s safety your Police and Security Department need to know what hazardous radioactive materials are entering, transiting or detonating and dispersing within your perimeter.
When and why are security personnel interested in radiation levels? Three time periods **Baseline time period:** Baseline mapping: Background varies from place to place, due to natural causes, and old pollution and uranium and potassium in road and building materials. **Prior to Detonation:** The terrorist moves radioactive materials into an area, for storage or pre-positioning a dirty bomb or nuclear bomb. **After Detonation:** An industrial accident, or a dirty bomb explosion releases large amounts of radioactive material in solid, liquid or airborne form.

**APPLICATION:** Each detector node in the **DSI-2-ITS** Precision Radiation Proximity analyzer system is small with unprecedented sensitivity and accuracy. The **DSI-2-ITS** is designed specifically for use to give warning in case of illicit or accidental storage or transport or radioactive and fissile material. Suitable uses are for travel and shipment centers both in USA and overseas. Also power plants and in hospitals, landfills and at customs entry and exit points. Sensitivity is greatest when vehicle slows or stops next to the detector’s location.

**REASON FOR NEUTRON DETECTION:** Some fissile materials have only WEAK gamma emissions which are hard to detect. These materials also have spontaneous neutron emissions. Detection of even a few neutrons is significant since the natural background neutron count rate is ZERO. When the neutron indicator comes on the operator knows that neutrons from fissile material are present.
NET WORKED
RADIATION TRACKING SYSTEM
Model- DSI-2NT-ITS

GENERAL DESCRIPTION: Small gamma and neutron monitor alarms on radiation level settable down to background level. The DSI-2-ITS can alarm at any of 99 preset levels. It also accurately measures exposure rate. The dose rate can be displayed on a local LCD display. When the alarm set-point is reached, the alarm relay is triggered. The DSI-2-ITS circuitry are completely digital, thus eliminating the inaccuracy inherent in any analog circuit. Calibration controls are recessed and covered.

This system can be installed at entrance and/or exit gates, at weight stations or check points, or anywhere that cars, trucks, railcars or pedestrians will pass by: preferably at reduced speeds for more accurate readings.

OUTPUTS:
(1) Alarm relay for customer use
(2) Serial (RS-232) data output
(3) (optional) ETHERNET NODE - complete with its own IP Address. (Optional)
