RADIATION SCANNER FOR CARGO CONTAINERS & TRUCKS
Model ~ RAD-20, -21 CANSCAN

FEATURES:
- NON-INVASIVE - EXTERNAL SCAN GIVES DETAILED INTERNAL INFORMATION
- DETECTS - ALL RADIOACTIVE MATERIALS, SOURCES & CONTAMINATION
- MORE SENSITIVE and BETTER RESOLUTION THAN BIGGEST VEHICLE MONITORS
- CREATES MAP OF INTERIOR
- PIN-POINTS LOCATION OF RADIOACTIVE CONTRABAND
- ISOTOPE IDENTIFICATION OF 'HOT' SOURCES
- REQUIRES ACCESS TO TOP OR ACCESS TO ONE SIDE OF CONTAINER (RAD-20 CANSCAN)
- DETECTOR IS IN A TUNNEL (RAD-21 CANSCAN)
- IP54

COMPLETE SYSTEM: Does Not Interfere With Vital Loading and Unloading of Cargo.

PROBLEM:
Large numbers of loaded shipping containers pass through & are stored at seaports around the world. We need to know which containers, if any, carry Radioactive Materials. Entering & doing a manual search of large numbers of containers is not feasible for many reasons.

SOLUTION:
The RAD-20, 21 CANSCAN give highly detailed, FAST RESPONSE, interior information from an external scan. The RAD-20 CANSCAN only requires access to the top or one side of each container, allowing scanning of stacked containers.

DESCRIPTION:
The RAD-20 CANSCAN has three main elements:
1. An 8ft H x 40 ft L mobile scanning detector
2. Computer analysis console
3. Mobile crane for detector placement.
Alternatively the detector assembly is easy to mount on existing port vehicles, such as a forklift, crane, etc.

RAD-21 CANSCAN has a fourth element which is a neutron generator and requires a license to own and operate.

(2) METHODS OF USE:
The RAD-20 CANSCAN is brought to the container.
The RAD-21 CANSCAN has the detector in a ‘tunnel’ and the container is brought to the detector.
RADIATION SCANNER FOR CARGO CONTAINERS & TRUCKS

Model ~ RAD-20, -21 CANSCAN

SPECIFICATIONS:

Sensitive Length: 8 ft Linear Detector

Overall Dimensions:
RAD-20 CANSCAN: 8 ft H x 2 ft W x 40 ft L OR 8 ft H x 2 ft W x 20 ft L
RAD-21 CANSCAN: 20 ft H x 16 ft W x 908 ft L (Standard)

SPECIFICATIONS continued:

Neutron Generator: In the RAD-21 CANSCAN a Neutron Generator gives enhanced sensitivity to fissile materials.

Shielding: Shielding & Collimation is provided, but may be deleted for a special lightweight version: RAD-20LW.

Electronics: Each detector has pre-amp and HV.

Isotope Identification: A Multi-Channel Analyzer applies Background Subtraction and uses a Sophisticated algorithms to compare the output from the highest counting detector to the extensive pre-loaded Spectrum Library to achieve accurate Isotope Identification.

Location Mapping: The computer uses the detector data to overlay a virtual 30 x 150 grid onto the shipping container, with grid lines spaced every three inches The visual display shows where the radiation emitting sources are located on this grid.

Data Storage: All data is archived to the Hard Drive and automatically backed-up to CD.

The Quantum Family of Software

Technical Associates has been a manufacture of accurate, easy to use Radiation Detection Devices. Since 1946, TA provides a complete Gamma spectroscopy systems including analytical software.

The Quantum Software packages have been designed to allow the spectroscopist to decide how an analysis is performed. Power & flexibility are the watchwords for these packages presenting the latest in the fields of pulse-height analysis and Gamma spectroscopy.

QuantumMCA provides support for a broad range of hardware with tools for qualitative analysis.

QuantumGold adds full function quantitative analysis for nuclear spectroscopy to the features of Quantum MCA.

QuantumGeD includes both qualitative and full quantitative analysis features for germanium detectors only (i.e., no NaI(Tl) detectors and no QCC mode).

QuantumGe is the same, but without de-convolution analysis.

QuantumNaD has both qualitative and quantitative analysis for NaI detectors only.

QuantumNaI does not include de-convolution analysis.

QuantumMCA is the basic MCA analytical package & is supplied with all TA multichannel analyzer instruments that require computer control.

For sodium iodide-based Gamma spectroscopy, TA offers the patented Quadratic Compression Conversion (QCC) (patent no. 5,608,222). It is implemented in the MCA2100R and MCA2100 Gamma spectrometers. This signal processing technique gives spectra with consistent peak resolution throughout the entire range of detection. This makes spectrum analysis fast and easy.

The following are just a few of the features:

- Spectrum memory control for controlling the display of up to 8 spectra. Tool Setup for entering analysis parameters.

- Device configuration for establishing device communication. Setting and identifying ROIs.

- Resolution and efficiency calibration. Quadratic Compression Conversion.
